

Keybinds Cheatsheet

A compact reference for the bindings actually present in `~/config/nvim`.

Leader: `Space`
Localleader: `Space`
Theme: Tokyo Night Storm

`<Leader>` means `Space` `C-x` means Ctrl + x `n` normal mode `i` insert mode `t` terminal mode

Core

<code>Space w</code>	Write file
<code>Space q</code>	Quit window
<code>Space Q</code>	Force close buffer
<code>Space nn</code>	Toggle line numbers
<code>Space y</code>	Copy to system clipboard
<code>Space p</code>	Paste from system clipboard
<code>Space ?</code>	Show buffer-local keymaps

Find

<code>Space ff</code>	Find files
<code>Space fg</code>	Live grep
<code>Space fb</code>	Open buffers
<code>Space fh</code>	Help tags
<code>C-n</code>	Reveal current file in Neo-tree

The dashboard also exposes Find File and Recent Files as single-key startup actions.

Panes

<code>Space sv</code>	Vertical split current file
<code>Space ss</code>	Horizontal split current file
<code>Space sf</code>	Find file in vertical split
<code>Space sF</code>	Find file in horizontal split
<code>Space se</code>	Equalize split sizes
<code>Space sx</code>	Close current split

Move / Resize

<code>C-h</code>	Move left
<code>C-j</code>	Move down
<code>C-k</code>	Move up
<code>C-l</code>	Move right
<code>↑ / ↓</code>	Resize height
<code>← / →</code>	Resize width

Terminal

<code>C-\</code>	Toggle terminal
<code>Space th</code>	Horizontal terminal
<code>Space 1</code>	Terminal 1 · server logs
<code>Space 2</code>	Terminal 2 · tests
<code>Esc</code>	Leave terminal insert mode
<code>jk</code>	Leave terminal insert mode

Inside terminals, `C-h/j/k/l` also moves across splits.

LSP + Code

<code>gd / K</code>	Definition / hover docs
<code>Space rn</code>	Rename symbol
<code>Space ca</code>	Code action
<code>Space f</code>	Format current buffer
<code>Space vs</code>	Select Python virtual environment

LSP bindings appear only after a language server attaches.

Buffers

<code>L / H</code>	Next / previous visible buffer
<code>Space bn / bN</code>	Next / previous buffer
<code>Space bx</code>	Close current buffer
<code>Space bX</code>	Close other buffers
<code>Space bp</code>	Pin buffer
<code>Space b1-4</code>	Jump to buffer slot 1-4

Bufferline shows open files across the top; panes remain your layout tool.

Completion

<code>C-Space</code>	Open menu
<code>Tab / S-Tab</code>	Next / previous item
<code>Enter</code>	Confirm selected
<code>C-e</code>	Abort completion

Git

<code>Space gp</code>	Preview current Git hunk
-----------------------	--------------------------

Markdown

<code>Space um</code>	Toggle rendered Markdown
-----------------------	--------------------------

Rendering is conservative: normal / command / terminal modes only, not insert mode.

Dashboard

<code>e / f / r</code>	New file / find file / recent files
<code>s / t</code>	Open server / test terminal
<code>c / u / q</code>	Config / update plugins / quit
